Internship Offer Letter

Student Name : Priya Raut
Stream : B.Tech
Branch : B.Tech(Electronics and Communication Engineering)
Institute Name : Shah & Anchor Kutchhi Engineering College
Internship Domain : Generative AI, Deep Learning & Language Models
Internship Duration : June 2026 - August 2026
AICTE Student ID : STU68295cc2f3d4d1747541186

We are pleased to inform you that you have been selected for the 8-Week **AICTE – EduSkills Virtual Internship Program**.

During this internship, you will learn and demonstrate industry-relevant skills that will enhance your employability and strengthen your confidence in the subject area.

The program is designed to provide structured learning combined with practical exposure.

Internship Structure & Evaluation:

- The internship will follow a **week-wise structured learning plan**.
- You will be required to complete **weekly assessments** to track your progress and understanding.
- Certain modules will require submission of **project documentation and assignments**.
- In the final week, you must appear for a **Final Assessment Test**.
- The final grade will be based on your overall performance, including weekly assessments, project submissions, and the final test.

Upon successful completion of all required steps and assessments, you will be awarded a **Virtual Internship Certificate**.

Please note that this offer letter will be considered valid only after the successful completion of the internship program and fulfillment of all assessment requirements, including obtaining the final completion certificate. Without the final completion certificate, this offer letter shall not be treated as a valid document for any official purpose.

The week wise Structure of the Internship is as Follows:

Week	Module	Description
Week 1	Deep Learning & PyTorch Foundations	Introduction to deep learning, PyTorch tensors and autograd, building and training neural networks using nn module, loss functions, optimizers, and training loops.
Week 2	Transformers & Hugging Face Ecosystem	Attention mechanisms, transformer architecture, working with Hugging Face models, tokenization, and running inference with pre-trained LLMs.
Week 3	Fine-Tuning & PEFT Techniques	Preparing custom datasets, fine-tuning pre-trained models using Trainer API, and parameter-efficient fine-tuning methods like LoRA and QLoRA.
Week 4	Embeddings & Vector Databases	Text embeddings, semantic similarity, cosine similarity, and vector search using FAISS, Chroma, and Pinecone for indexing and querying.
Week 5	Retrieval-Augmented Generation (RAG)	Document processing, vector stores, RAG pipelines, prompting strategies, generation workflows, and evaluation techniques.
Week 6	LLM Chatbots & AI Agents	Building custom chatbots with memory and dialogue management, advanced LLM techniques including ReAct agents and tool integration.
Week 7	Advanced Prompting, Evaluation & AI Ethics	Prompt engineering, chain-of-thought & few-shot prompting, generative content creation, evaluation metrics (BLEU, ROUGE, BERTScore, human eval), safety, bias detection, hallucination mitigation, and introduction to multi-modal generative AI.
Week 8	Best Practices for Deploying Generative AI Models & Capstone Project	Serving, Monitoring
Internship Grade Point Assessment		

Note: There is no stipend associated with this internship.

We congratulate you on your selection and wish you a successful learning journey.

Bibek Ranjan
